RE: ER 0253-239 (20231) Bridge Scour Mitigation Project

The Colorado Department of Transportation has accepted Project ER 0253-239 (20231), Bridge Scour Mitigation, as of the above date. A final inspection has been made and the work found acceptable to the Department of Transportation as of the close of business on 15 June 2015. A total 39 days of a planned 68 calendar days of Time Count were used.

Estimate 3 will be processed in July to pay for work completed in the month of June.

Please extend my deepest appreciation to **[Redacted Name]** for the extraordinary and successful efforts of their respective crews to complete construction at the South Saint Vrain and Little Thompson sites in advance of the high-water conditions resulting from the unseasonable amounts of precipitation to which the drainages were subjected in May.

I am equally grateful for the planning by Jerry Irons and for your administration as project manager, which were both key to the timely completion and high quality of the scour mitigation work.

Sincerely,

William Aldorfer
Project Engineer
